Have YOU Registered?

Thursday, October 31 is the last day for relatives of persons on the Assessment Roll, and tenants, to register on the Voters' List for the town and school district. If they have not registered on that date they will be deprived of their vote at the town and school elections next year.

Some persons are under the impression that having registered in previous years it is sufficient. The Town Act, however, requires that all relatives and tenants must register each year. This applies not only to the town, but also to the rural portion of the school district.

If you have not already registered remember Thursday, October 31 is the last day.

Below is the official public notice—

Notice to Relatives of Persons On the Assessment Roll And to Tenants

Notice is hereby given that during the months of September and October, applications may be made under the provision of section 188 of the Town and Village Act for inclusion in the voters' list of the town of Didsbury by the following persons, namely:

The wife, husband, father and mother and every son and daughter of any person whose name appears on the assessment roll who are entitled to be placed upon the said list—

(a) if he or she is resident with the said person within the town or assists in a business in respect of which he is taxable; and

(b) if he or she is of the full age of twenty-one years; and

(c) if his or her name does not already appear on the roll;

Tenants who have rented an assessed parcel for a period of twelve months immediately preceding the last day of August of this year.

TOWN OF DIDSBURY

W. A. Austin, Sec. Treas.
August 28th, 1935.

Knox United Church Notes.

A Special Boys' Service will be held next Sunday, October 27, at 7:30 p.m. in honor of the coming of age (21st anniversary) of the Tuxis and Trail Ranger Boys Movement in Canada.

Boys of the groups will take part in the service, and special music will be given by the C.G.I.T. choir.

Come and worship with the boys. There will also be services at Westcott and Westerdale at the usual hours.

Evangelical Church Notes

The pastor's sermon subject at the morning service next Sunday will be, "Signs of the Times." In the evening the Women's Missionary Society will hold its Annual Thank Offering Service. The Missionary Circle will present a Candle Light Pageant entitled, Living for Jesus.

The Brotherhood meeting has been postponed until Tuesday evening, October 29th.

Thank You!

To the Social Credit Groups and Electors of the Red Deer Federal Riding:

I wish to show you my deep appreciation of your efforts, with its subsequent victory, on October 14.

I am by no means unmindful of the responsibility I have accepted. I do, however, wish to show you that I will do everything possible to further the great Christian Cause for which we stand, and to do my share in building a better and happier Canada.

Yours very truly,
ERIC J. POOLE.

Farmers Should Test Seed Grain Soon

Mr. Weir, of the Dominion Seed Grain branch, was in town on Tuesday making a survey of the seed grain requirements for next year in this district.

Mr. Weir stresses the fact that on account of frost damage the farmers should test their grain for germination as soon as possible. He is of the opinion that there will be sufficient seed wheat in the district for seed grain requirements but that there may possibly be a shortage of seed oats and barley.

He stated that even now the laboratory at Calgary was working at full capacity testing seed grain for germination.

Westerdale M.D. Council Meeting

A meeting of the Westerdale Council was held Monday at the municipal offices, with Reeve George Clark in the chair.

Good progress was reported on the road-grading program, and it was expected that the program of grading would shortly be completed. Six miles of grading in Divisions 5 and 6 yet remain to be built with the elevator-grader.

Councillors Alex Hogg and N. S. Clarke were appointed delegates to the Municipal Convention to be held November 20-21-22.

It was decided that the councillors make a survey of the bridges and culverts and that notices be posted at those considered to be dangerous to heavy traffic. It was pointed out that many of the bridges and culverts built a few years ago were not built to withstand the heavy truck traffic which had developed since they were constructed.

Several matters of relief were discussed, and routine matters and payment of accounts were attended to.

FREY-BRUBACHER

A quiet wedding took place at the home of the bride on Wednesday, October 16th, when Miss Ruth Brubacher was united in marriage to Mr. Lorne Frey. Rev. H. J. Wood performed the ceremony. Only the immediate families of the contracting parties were present.

After the wedding supper the happy couple left for a short honeymoon.

Plans Rural Cash Relief

Alberta Gov't Would Pay \$5 and Municipalities \$2.50 Monthly

Paving the way for the \$5 minimum cash payment monthly to rural families in need of relief, an order-in-council has been passed by the provincial government.

As a result, municipal secretaries are being circularized in order that the plan can be brought to the attention of rural authorities and the extent of the response gauged by the government.

The plan was outlined recently by Premier Aberhart, who said it was not to be regarded as providing a real "basic dividend".

While the minimum amount was set at \$5, which would be provided by the government, the municipality would be expected to match it with \$2.50. As compensation for its contribution, the municipality could require the relief recipient to give some return in work.

If the size of the family justified more than the minimum, this would be provided, while as the sum increased, the municipality's share would be proportionately increased.

Forthcoming Attractions at Didsbury Opera House

During the next few weeks Mr. Sharp is offering to his patrons pictures which have received national acclaim. He is to be complimented on booking such a number of outstanding pictures for the beginning of the winter season.

October 30-31: Victor Hugo's "Les Miserables," starring Fredric March and Charles Laughton.

November 6-7: Shirley Temple in "Little Colonel."

November 13-14: George Arliss in "Cardinal Richelieu."

November 20-21: Fred Astaire and Ginger Rogers in "The Gay Divorcee."

November 27-28: Will Rogers in "Life Begins at 40."

'SALADA' TEA

Controlling The Rust Menace

Very little reflection is required to demonstrate that an expenditure of ten years' intensive work by trained scientists and \$600,000 of coin of the realm is a low price to pay for insurance of Western Canada's future wheat crops against the appalling loss which a few days of rust infestation can levy against the farmers of the West.

The \$600,000 referred to and the ten years spent in work in the laboratory and the field, it was recently announced, is the cost to the nation to date of producing an un-named wheat which, according to authorities, is able to withstand a rust epidemic unscathed and at the same time produce a kernel with all the desirable attributes of the best commercial varieties of bread wheat.

Coupled with this announcement was the further statement that this new wheat can be multiplied to a sufficient extent at Dominion government experimental farms and on private lands under government supervision to enable a general distribution of seed to be made to the farmers of the west in 1937.

These announcements were accompanied by a further declaration of considerable importance, namely, that the government intends to retain control of the source of supply of this valuable seed and to see to it that the farmers are not exploited by private concerns in connection with its distribution.

The statement means that the farmers of Western Canada will be able to secure in two years time a substantial supply of seed wheat that is guaranteed to enable them to grow a crop completely immune from ravages by rust, and at a reasonable price, probably at cost.

It is perhaps a coincidence that these announcements were made at a time when Western Canadian wheat crops were hit by the worst infection of rust that the west has known in history but the information should put new heart into the many thousands of farmers who this summer saw their hopes of recovery blighted when millions of rust spores descended on the most promising crop in years and slaughtered yield and grade which meant reducing price to the vanishing point.

The news given in these important announcements may well mean that 1935 will be the last time that Western Canadian farmers have to suffer tremendous loss from rust infestation. This statement is made with caution, however, for although it is not usual for severe rust infestation to follow in successive years, it cannot be stated affirmatively that it will not occur again before sufficient of the new wheat is grown to make a repetition of the 1935 calamity an impossibility.

Results of the work that has been done during the ten years' quest for a rust resistant wheat and laboratory and field trials of the strains which have been produced, however, appear to indicate that the battle against rust has been won by the scientist and agronomist.

There is additional comfort for the farmer, however, in another coincident announcement and that is that some of the five strains of rust resistant wheat which are being increased this year also show a tendency to resist other diseases, those mentioned specifically being stinking smut, leaf rust and one of the varieties is reported as "moderately resistant" to loose smut.

So that it is possible that while the experts have won their fight against rust they have at the same time scored at least partial victory in the battle against some of the other diseases to which wheat is heir. To what extent these other disease pests have been overcome while the major conflict was being waged time and experiment alone will prove. It is safe to say, however, that these apparent advantages will be followed up with the same vigor that these scientists have shown in their now successful efforts to overcome the major enemy.

Definite proof that the new wheat is all that is claimed for it exists as a result of field trials and laboratory tests which have been made during the ten years the work has been in progress and particularly this season.

In field plots the new wheat showed up clean and bright while alongside it the other standard varieties of commercial wheat were sick with the disease. Laboratory and commercial tests have proven conclusively that the new wheat has milling and baking qualities equal to that of Marquis and Reward.

The tests have demonstrated equally conclusively that the new wheat has the requisite length and strength of straw, yield, earliness, appearance of kernel and weight per bushel possessed by the best of the present day commercial varieties.

In other words the new wheat fills all the requirements of the type of hard spring wheat which has made Western Canada famous in the world's bread markets and has the additional ability to withstand rust, and perhaps to withstand some of the other diseases which periodically take toll of the Western grain farmer.

Eighty per cent. of the new radios in England were bought on time. Ninety per cent. of the world's nickel supply is produced by Canada.

DON'T RISK BAKING FAILURES....

Empress Of Ethiopia

Claims She Is Descendant Of Queen Of Sheba

Through all the worries and anxieties brought upon him by Italy's threatened conquest of Ethiopia, Emperor Haile Selassie's most devoted companion and counsellor has been his wife, Empress Waizeru Mennen. Gifted with uncommon intelligence, astuteness and foresight, the 41-year-old Empress urged the Emperor not to yield to Mussolini's threats but to defend the kingdom to the last.

Emperor Haile Selassie is Waizeru's fourth husband. Maybe that is why she is called the "Queen of Kings." They have three sons and three daughters. They have been married 23 years, and it is said they have never had a quarrel. The Emperor like most of the higher-caste Ethiopians, is monogamous. Waizeru is his only wife.

"Waizeru" means literally "Lady of Quality." She is the daughter of a famous provincial prince, and has a very dignified and aristocratic bearing. She was educated by private tutors. The "Queen of Kings", who is fat, not fair, and 40, claims to come from the same Hamitic stock as the famous Queen of Sheba who ruled Ethiopia 3,000 years ago. She also claims descent from the glamorous Cleopatra. She is addressed by her ten million native subjects as "Your Serene and All-Just Majesty". She signs herself "the Conquering Lion of Judah hath conquered."

The Empress speaks no language except the ancient Amharic, which is of Semitic origin. All attendants who approach her shield their mouths with their white shamma (shawl).

Dionne Quintuplets Bowl

Smartly Designed Bowl Is Offered As A Gift

A surprise gift offer which will interest every parent, every child and, in fact, everyone who has ever heard of the world-famous Dionne Quintuplets, has been announced. The article offered is a cereal bowl created in honour of the five little sisters and called the Dionne Quintuplets Birthday Bowl. Made of shining lifetime chromium, it is six inches in diameter, smartly designed in modern lines, and embossed inside with a charming sculpture of the "Quints". On the rim are engraved the names of the babies—Emile, Annette, Marie, Yvonne, and Cecile. Besides being an ideal cereal bowl for a child, it makes a distinctive olive and celery dish or bon-bon dish.

Readers can obtain this delightful gift by sending two Quaker Oats trade-marks, plus fifteen cents to help cover postage and handling charges, to The Quaker Oats Company, Saskatoon, Sask.

Heaviest Air Passenger

United Air Lines Carried Judge Who Weighed 400 Pounds

When County Judge A. W. Dulweber applied for a ticket at the United Air Lines office at Omaha the booking clerk was in a quandary. The judge weighs four hundred pounds and is probably the heaviest in the world. The clerk did not wish to offend him, but at the same time wondered if he could book him on board an aeroplane on only one ticket. The company were pleased to take him without extra charge, however, as the judge was undoubtedly the biggest passenger they had ever carried, and they wished to mark the occasion.

A Strange City

Queer Place In Derbyshire, England Has Only Eight Houses

A strange city may be found in England within two miles of Chesterfield's famous crooked spire. It is another Derbyshire curiosity. Down a winding bridle-path is Tapton City—the queerest and smallest city in the world. It has only eight houses and 25 inhabitants. It is the city of nothings, for there is no church, no chapel, no public-house, no shop, no post office. No electricity or gas is found there—they use oil lamps. How or why it became a city nobody knows, but it is believed to have been founded on the ashes of a Roman camp.

The temperature of one of the sun's spots is about 4,700 degrees centigrade. This is about 1,000 degrees cooler than the sun's spot-free surface. 2118

New Type Flying Boat

Soviet Aviation Authorities Try Out Parachute Kite

A passenger and freight-carrying "parachute kite," which Soviet aviation authorities said they believed would be able to ascend into the stratosphere, had its first successful trial lifting four tons of cargo.

An ordinary freight parachute, with a dome 65 feet in diameter, was used. The load was attached with short ropes leading from one side of the parachute. The other side bulges upward, giving the lifting power. Longer ropes, running from the bulging side, also were attached to a load which, for passenger-carrying purposes, would consist of a gondola. By manoeuvring the longer rope, the crew, experts said, could steer the parachute and control its ascent and descent.

The whole combination load was called a "parachute train" in the official description by Prof. I. Grokhovskiy, chief of the experimental institute of the Commissariat of Heavy Industry which is sponsoring the trials. Grokhovskiy said he believed the parachute could carry explorers into the stratosphere and described flying in a parachute kite as the safest mode of air travel since the parachute is always opened, assuring a safe descent.

Transmits Sound And Vision

Television In Germany Covers Distance Of Nearly 50 Miles

A great advance in television service has been achieved by a transmission from Witzleben to Gildenhall, Germany, a distance of nearly 50 miles. The transmission, both for sound and vision, is stated to have been very good. Dr. M. Hadamowski, head of the German broadcasting service, was seen and heard by the men of the labor camp at Gildenhall, whom he addressed. Afterwards, news pictures were transmitted with results reported to be equally satisfactory.

Only Four Feet Wide

Philadelphia Is To Have Narrowest Building In U.S.

A building being erected at Philadelphia, Pennsylvania, will, it is believed, be the narrowest in the United States. It will be only four feet wide. The site of the building is all that is left of a corner plot from which the city sliced most of the ground in order to widen a street. The new building will be constructed of stainless steel, and half of it will contain a restaurant which will have a front which can be removed in summer.

The possibility of travelling to the moon, by means of "a flying chariot" was discussed by a scientific-minded bishop in England in the seventeenth century.

New Name Sought

Scores of letters have been received by J. R. Macdonald, Stipendiary Magistrate of Hull, England, offering alternatives to the world "dole", for which he offered a prize of \$250. So far not one suggestion is regarded as good enough for the award. One writer sent a list of 65 alternatives.

Problems Of Production Studied Under Prairie Rehabilitation Program

An important and very practical phase of the Prairie Farm Rehabilitation programme centres around the intense studying of the farm problems of production resulting from drought and soil drifting, also around the demonstrating of the most successful precautionary and controlling measures. As a medium for carrying on this work, the Prairie Farm Rehabilitation Act provides for the establishment of District Experiment Sub-Stations. These sub-stations are located in problem areas, principally in the south and central portions of the three Prairie Provinces, where hardships and financial loss have resulted from varying hazards to crops, community wide in their extent. Up to the present time thirty-nine district experiment sub-stations have been established on varying soil types, and an active programme of work has been instituted. As a broad objective the procedure aims to develop a system of farming with as high a degree of permanency as may be possible, a system that may be adaptable to farming areas where grain farming is principally being followed, with limited rainfall and on soils subject to drifting.

The system of cropping is based primarily on strip farming with its accompanying necessary cultural practices and short crop rotations. The two year rotation of fallow, wheat alternating has been most widely laid down, although in certain sections where the annual precipitation warrants such a procedure, a three year cropping system of two crops of grain after fallow is being followed. The cereal crop being grown on these short rotations varies in keeping with the individual need and aims to produce wheat primarily as the cash crop, at the same time to grow oats and other cereals as forage, thus building up feed reserves as an assurance against the possibility of recurring short crop years and the resulting winter feed shortage which is frequently experienced. The width of strips vary from eight to sixteen rods, depending on the soil type and its past history with respect to soil drifting or wind erosion. The effect of cover crops and the use of manures and chemical fertilizers is also under experimentation and study as to their effect on controlling soil drifting.

The development of farm home shelter belts to protect the farm buildings, farm home and to give shelter to stock around the paddocks, is under way. Definite plans have been made and land summer fallowed this season as may be required in keeping with the programme to make it possible next spring to set out tree plantations and shelter belts on farms operating as district experiment sub-stations, where they do not now exist, and also to expand the present shelter belts as may be advisable. The farm garden, as a source of supply of vegetables for the family during the summer and winter is being provided for in the layout and is being enclosed in the shelter belt adjoining the buildings. The garden area is being divided into two sections so that each year cropping will take place on summer fallow land. A sufficiently large area is being set aside for this purpose to make the use of horse equipment possible as a labour saving procedure in farm gardening.

To provide adequate pasturage for such livestock as may be kept, including horses for farm use, a permanent grass paddock adjoining the buildings and protected by a tree shelter comes within the programme of work. In many cases where such do not already exist, land has already been seeded to provide this pasture, using Crested wheat grass or Bromus grass as the foundation when seeding down. As a supplement to the permanent pasture, as the season advances and growth becomes slower, provision is being made for supplementary pastures, and an area is being seeded down to fall rye as well as to spring grain.

In the study of drought and soil drifting problems on sub-stations, very special attention is being given to the methods of handling the sum-

merfallow. Tillage practices being directed to permit a lumpy surface and to retain as large a portion as possible of stubble and other forms of vegetation on the surface.

In the organization of a sub-station, the land is not purchased but rather a co-operative agreement is entered into with a progressive and interested farmer in these different districts. In consideration of an annual rental for land use, this farmer undertakes to provide the necessary labour and equipment to carry out the work under the direction of a supervisor representing the Dominion Department of Agriculture. To be effective in studying such a problem as that of soil drifting, a fair sized unit is necessary and for such an area up to 640 acres is that utilized in sub-station work. The district experiment sub-station is a community developed organization and aims to study and work with farmers in these districts for their mutual benefit so that sound practices and those most likely to succeed under such conditions may become general in their application.

District Field Days have been held this year on these sub-stations at which time the station operator and representative of the Dominion Department of Agriculture reviewed the work under way and results being obtained. The extent and direct importance of the problem under consideration has been evident from the group of from 100 to 350 farmers who have assembled to discuss with one another and study their local community problems.

The work in connection with the District Experimental Sub-Stations is being directed by John C. Moynan, chief supervisor of Illustration Stations, Dominion Experimental Farms.

Salt In Road Construction

New Type Of Surfacing Is Called Salt Concrete

The speed record of Sir Malcolm Campbell, made on the salt surface of the Bonneville flats in Utah has called attention to the use of salt in road building, and particularly to research work in this connection by a Canadian in Nova Scotia eight years ago. Roads, embodying principles outlined by A. R. Chambers of New Glasgow, N.S., have been built in the United States and have been found to stand up against the ravages of weather and traffic, despite the inexpensiveness of building costs and maintenance. Roads of this type are also being built in Ontario, particularly in Lambton and Simcoe counties.

Early this year, the United States government announced the appointment of a committee to work under the direction of the Highway Research Board and to study the application of common salt as a stabilizing chemical for use in clay-gravel roads.

Seeking a solution to the dust problem of Nova Scotia's highways, Mr. Chambers constructed short stretches of roadway at Truro and Elmsdale. Mr. Chambers' road-building projects attracted highway experts from the state of Michigan; who, hearing of the Canadian experiment, journeyed to Nova Scotia, inspected the highway built by Chambers and returned home to conduct further research into the value and practicability of all the salt-clay combination. Today, an entirely new type of road surfacing has been developed and is known as salt concrete.

Market For Live Stock

Between Aug. 1 and Sept. 5 there were 1,163 head of stock and feeder cattle moved from Edmonton to the Ontario market. The United States market also opened for hogs from the Edmonton area, 489 going to Spokane and 137 to St. Paul, beside 88 cattle to the latter market, in the period given.

Eels have their scales inside their skins. Their slipperiness is a valuable asset to them in escaping from their enemies, and is due to a highly polished skin which exudes a sticky mucus.

Ducks Need Some Shelter

Will Not Thrive If Protection Not Given At Night

There is a fairly common impression that ducks require no shelter. This is quite correct so far as running about during the day is concerned, except in hottest summer; but they never thrive properly without some shelter at night. It need not be elaborate, nor large enough for them all to promenade in it all night. It is unlikely that many will stay in it at a time. They like to be outside, and yet to be able to seek shelter occasionally, and the shelter must be perfectly dry.

Unless the house is made on sloping ground the easiest way to keep it dry is to fill it with six inches of earth and to dig a little drain around it. Put three to six inches of straw on the floor, and the ducks will be warm and dry as soon as they enter. Five feet is high enough, for the pen with three sides perfectly wind-proof, and the fourth partly closed.

Would Abandon Branch Lines

Make Applications For Closing Lines In Manitoba And B.C.

Applications for leave to abandon two branch lines in Manitoba and one in British Columbia, operated by its subsidiaries, have been filed by representatives of the Great Northern Railway in Winnipeg with the board of railway commissioners.

In Manitoba, the applications seek abandonment of lines running from Brandon to the international boundary and from Morden to the international boundary, operated by the Brandon, Saskatchewan and Hudson Bay Railway.

In British Columbia, leave to abandon the line from Princeton to the international boundary, operated by the Vancouver, Victoria and Eastern Railway, is sought.

The skeleton of a giant Irishman, seven feet, seven inches tall, is one of the remarkable specimens in the College of Surgeons, London.

Social Hygiene Council Undertakes To Organize Health League Of Canada

Grasshopper Invasions

Matter Is Discussed At Imperial Entomological Conference

Best methods of dealing with locust and grasshopper invasions was discussed by the fourth Imperial Entomological conference in London.

H. G. Crawford, of the entomological branch of the federal department of agriculture at Ottawa, declared the total area of North America infested with grasshoppers in varying degrees this year was 80,000,000 acres.

The loss last year had been reduced considerably following the campaign in Saskatchewan, the Canadian delegate added.

Dr. A. E. Cameron, of Scotland, suggested the outbreak of the grasshopper plague in Canada might prove a blessing in disguise "since the Dominion has already produced more grain than can be distributed."

New Army Blimp

United States Machine Pronounced A Success After Tests

The United States army tested its huge TC14, described as the largest non-rigid airship in the world, and pronounced it "very successful." For two hours the giant blimp, with overall dimensions of 235 by 54 feet and manned by a crew of nine, cruised over Scott Field, Ill., for the benefit of ground observers. The ship is estimated to have an altitude possibility of 10,000 feet. The blimp is powered by three air-cooled engines capable of developing a speed of 90 miles an hour.

Confucius lived to be about 72 years old, living from 550 to 478 B.C.

The SNAPSHOT GUILD

IT'S FAIR TIME

Left—"The Country Fair or bust." Right—Even the side-show offers snapshotting opportunities.

Let's forget about the home, the seashore, the woods and pictures of the children and to-day think about picture making opportunities at the county fair.

September is fair time and I'll wager that mighty few of you have ever given any thought to this angle of snapshotting. Right? Honestly the county fair offers more possibilities for snapshotting than space will permit telling about. Can't you see the barkers in front of the side-show extolling in husky, loud voices the merits of their shows? There's the side-show band with its battered instruments letting forth loud blasts of discordant music; the not so clean looking vendors of dolls, trick gadgets, balloons and various other things of questionable value; every one of them a subject for good human interest pictures.

But let's look toward the more serious side of the fair—the exhibits, for instance. By making intelligent use of your camera you can take home with you not only pictures of general interest but if you are particularly interested in farm products you can snap record pictures that may later prove invaluable. There is the judging of cattle, sheep, horses and hogs, for instance. If the judging is done in an open-air ring you can snap the picture of the winner of the blue ribbon with any camera—box type or folding.

In taking such pictures, or any picture, as far as that is concerned, don't just look in the finder and snap

the first thing you see. If the animal being judged has any unusual markings manage to get to a place near the ring where these markings show up the best in your finder. Try too to avoid unattractive backgrounds such as telephone poles, wires or sheds.

Among the innumerable picture possibilities at the fair you will surely want to take some action pictures and a fair isn't complete without the thrill of horse racing whether they feature the veteran driver proudly seated in his sulky or the young, dare-devil jockey.

Snap a picture of the start of the race as the drivers or jockeys maneuver their horses to the barrier or starting post and by all means take your position at the turn of the track as the horses dash perilously around the curve and into the "home stretch".

Remember this, however. If you do not have a camera with a very fast shutter, say one that will operate at 1/500 of a second or faster, don't try to snap a rapidly moving object as it whizzes directly across the lens of the camera or direct line of vision. Your chance of getting a good, sharp picture are much greater if you catch your subject at an angle of about 45 degrees. It's always better to play safe than to take a chance and perhaps get a blurred picture. Load your camera with film to-day and be ready for that eventful day when you are "off to the fair".

JOHN VAN GUILDER.

By reason of many suggestions coming from all parts of Canada and because of the ever increasing need of some voluntary organization capable of spreading knowledge regarding preventable illness, the Canadian Social Hygiene Council has undertaken the responsibility of organizing the Health League of Canada.

By this action the officers and directors will be enabled to greatly enlarge the scope and activities of the present organization and make more concrete contributions to the cause of public health and preventive medicine than in the past. It is felt by the National Board and by members generally throughout Canada that this step is in accord with the growing realization of the importance of health as a Dominion and indeed an international issue.

The Health League of Canada will undertake a continuous programme of education in the means of preventing illness and prolonging life and the need for governmental and private action to this end, using the press, the radio, the pamphlet and the public speaker as a means of transmitting reliable information to the public. Widespread support of this new development is already assured by communications from departments of health, educationalists, service clubs, churches and religious leaders throughout Canada.

The Honourable Mr. Justice Riddell, distinguished jurist, member of the Supreme Court of Ontario and internationally known as a writer and speaker, has been president of the Canadian Social Hygiene Council for the fifteen years of its existence. He now becomes president of the new organization.

"The solution of health problems rests in the development of a co-ordinated health programme under Dominion leadership," Dr. Bates says, "and the Health League of Canada proposes to aggressively work toward this end."

It is understood, of course, that leadership means nothing more than the term implies, nor is it advocated that there should be any change in the responsibility or the relationship of the Dominion and Provincial Departments of Health. It is desired at this time only to emphasize the importance of health as a national issue and the desirability of co-operation on the part of all to the effect that illness rates may be cut to an absolute minimum.

The Island Of Raasay

Was Once Owned By Follower Of Bonnie Prince Charlie

The suggestion made in the British House of Commons the other day that the Ministry of Agriculture surrender to the Ministry of War the 28-square-mile island of Raasay, one mile northeast of Skye, Scotland, for a British Heligoland, has revived a couple of reminiscences of the forgotten island. Dr. Samuel Johnson and Boswell visited Raasay in 1773. The room and bed in which Johnson slept can still be seen. The travellers had a rough crossing. "Th's," said Dr. Johnson, safely landed on Raasay with only the loss of his spurs, "is now the Atlantic. If I should tell at a tea table in London that I had crossed the Atlantic in an open boat, how they'd shudder, and what a fool they'd think me to expose myself to such a danger." A McLeod of Raasay, before he followed Prince Charles in 1745, took the precaution of making over the island to his son. After the rebellion he hid in an underground cave. His son, claiming the property, swore that his father was below ground, and that he had walked over him.

Prefer Being In Jail

The 1,200 inmates of Canton's first prison, 200 of whom are women, "are better off in the prison than they would be outside working as laborers or than they would be as peasants living on farms." This is the finding of a committee of Chinese newspapermen who have investigated the first prison. The committee finds most of the prisoners dislike the idea of freedom.

Help Red Cross to Help Others

An appeal is now being made for
funds to carry on the work of the
Red Cross in Alberta. During the
last few years the need of the Red
Cross has been increasingly great,
while the necessary funds to carry
on the work have been more difficult
to obtain.

The Red Cross has been instru-
mental in supplying clothing to
21,221 persons whose cases did not
come within the scope of government
relief. Dressings, medicines, eye-
glasses, dental treatment, and special
diets in cases of malnutrition,
diabetes and anaemia, have been
supplied. It has provided 250 baby
layettes, cocoa, milk, and hundreds
of children's garments. Artificial
limbs, surgical boots, abdominal
belts, etc. have been provided for
people unable to pay for them.
During the past eleven months,
additional to the above services, the
Red Cross has distributed clothing
for the provincial government to
18,971 people.

The Junior Red Cross Hospital at
Calgary is one of the finest and most
beneficial institutions in Western
Canada. There, 1,300 sick or crippled
children have been treated free.
Cases of tubercular bones, osteo-
myelitis, club feet, infantile paral-
ysis, cleft palates, tonsils, adenoids,
and eye disabilities, have been treated
by Calgary surgeons who have
donated skill and time. There is a
splendid school in connection with
the hospital, with a fully qualified
teacher in charge.

This great work is made possible
only by the donations from the peo-
ple of Alberta, and you are asked
to do your part by contributing.

The membership fee to the Red
Cross is \$1.00 per year and member-
ship fee and contributions can be
handed to Mr. W. A. Austin, the
local secretary, or sent to the Cana-
dian Red Cross Society, Customs
Building, Calgary.

Dominion Dept. of Agriculture to Give Series of Radio Talks

The Dominion Department of
Agriculture will again be on the air
each Thursday evening during the
forthcoming winter months over the
coast-to-coast network of Canadian
Radio Commission stations at 5:20
to 5:30 p.m. eastern standard time,
from Montreal over the French net-
work; from 8:20 to 8:30 p.m.
eastern standard time for the mari-
time provinces, Ontario, Quebec and
the Prairie Provinces, and for the
British Columbia network from Van-
couver 9 to 9:10 p.m. Pacific time.

This season the same title for the
series of talks will be used, namely,
"Romance and Dividends in Agri-
culture." Each talk will be of
10 minutes' duration, and the sea-
son's program includes a variety of
subjects which should be of interest
to everyone.

WEEKLY SERMONETTE

When we cannot afford to buy
for cash, how can we afford to buy
on credit?

Thanks.

I wish to thank my many friends

Profit in Feeding Balanced Ration

Imagine anyone trying to run an automobile on coal-oil, because it is cheaper than gasoline! Everyone knows that kerosene is not a suitable fuel for use in a high speed internal combustion engine, and that this practice, instead of reducing the cost of operation of the car, would greatly increase it.

Many farmers have a hazy idea that a "balanced ration" means a mixture of many kinds of high-priced feedstuffs. This, however, is not necessarily the case. By the term "balanced ration" we mean any combination of feeds which will supply the necessary nutrients to properly nourish an animal over a 24-hour period.

Let us apply our gasoline engine illustration to the feeding of a balanced ration; the animal is the engine, a balanced ration the gasoline, and any feed or mixture of feeds which does not form a balanced ration, is the kerosene. Although

sometimes the balanced ration may cost more per unit than the unbalanced ration, just as gasoline costs more than coal-oil, the resulting production is so much greater that the net profit shows an increase.

In order to balance the ration of an animal it is not always necessary to supply any feed, except salt, which is not, or cannot be, grown on the farm. Sometimes, however, because of protein or mineral deficiencies in the feed on hand, or from other reasons, it may be necessary to purchase supplementary feeds; but if the right supplement is used in the correct proportion to balance the ration it will be found that the amount of feed consumed per pound of production will be decreased, so that the net profit will be increased.

Next week this paper will carry the first of a series of articles on balanced rations for different classes of livestock.

Social Credit forces entered Britain's election arena Monday, proposing in their manifesto a "dividend" of \$1,500 a year for each family over and above their present income.

Items of Interest

The Duke of Gloucester and Lady Alice Montague-Douglas-Scott will be married November 6 as originally planned, it has been officially stated. But the ceremony will be private because of the death of the bride's father, the Duke of Buccleuch.

An earthquake, dealing death to two men and injuring a score, scattered wreckage Friday in the main streets of Helena, Montana's hilly capital, focal point for a week of tremors tracing a crazy pattern across the United States northwest and part of Canada. It is estimated that the damage might run as high as \$2,000,000. The severe overnight shock tore at the mountainous continental divide and spread into three states, Montana, Idaho and Washington, and shook the border points in three Canadian provinces, Alberta, Saskatchewan and British Columbia.

Near completion of the 465-mile roadbuilding program of the Alberta

government was announced Saturday. The program was made up of 192 miles of graveling and 253 miles of grading. The biggest undertaking was the 49-mile stretch between Strathmore and Duchess, all of which has been completed. Another of the main graveling undertakings was 35 miles from Obed to Jasper Park boundary on the Jasper highway. The following roads have been or are being graded: Calgary-Strathmore, Cochrane-Morley, Kananaskis-Banff Boundary, Coronation-Veteran, Hardisty-Hughenden, Irma-Wainwright, Edson-Sundance, Obed-Jasper Park, Edmonton-Gibbons, Bentley-Rimby, Dogpound-Sundre, and Grainger via Carbon to Route No. 9.

Miss Ruth Nichols, an ace airwoman of the United States, and five of her employees, were injured when a big 20-passenger plane crashed at Troy airport Monday. Miss Nichols was removed to a hospital where her condition was declared "quite serious." Her pilot, Capt. Harry Hublitch of New York, also was seriously injured.

THE MODERN CAR

THE NEW FORD V-8 FOR 1936

Why do we say The New Ford V-8 for 1936?

What is new about it?

Of course, the newest engine in the low-price car field is still the V-8 engine. Since Ford made it available to all car users (keeping it as economical as cars with fewer cylinders) the Ford V-8 has been the newest engine on the market, and remains the newest for 1936.

You may buy a car on minor "talking points"—some specially advertised feature "with the car thrown in"—but, after all, it is the engine you buy when you buy a car. Hence we put the engine first.

Other new points about the car make a long list.

Its lines are much more beautiful. The hood is longer and sweeps forward over the distinctive new radiator grille, giving the car a length and grace that are instantly impressive. The fenders are larger, with a wide flare. Horns are concealed behind circular grilles beneath the headlamps. New steel wheels.

Ford upholstery—always of sterling quality and excellent taste—is rich and enduring. The appointments of the car have a new touch of refinement. There

is no question about the increased beauty of the Ford V-8 for 1936.

In more practical matters, many improvements have been made—Steering is made easier by a new steering gear ratio. The cooling system circulates 4½ gallons of water through a new, larger radiator. Natural thermosiphon action is assisted by two centrifugal water pumps. New style hood louvers permit a rapid air-flow around the engine.

Easier, quieter shifting of Ford gears—The gear shift lever now travels a shorter distance.

The two qualities you want in brakes—Brakes that stop the car with ease and certainty. Ford Super-Safety Brakes of the long-tested, fool-proof, mechanical design.

Safety—as always—in the electrically welded genuine steel body. Safety Glass all around at no extra cost. Hundreds have written grateful letters because this glass has protected the safety of their families.

A car you can drive without strain all day, if you like, in city or country. Steady, holds the road, responds to the

driver's touch like a well-trained horse. You don't have to "push" or "fight" the Ford V-8—driver and car easily get on terms of good understanding with each other.

An engine has much to do with the roominess of a car. Very much indeed. A long engine uses up car space. The compact V-8 engine permits much of the ordinary engine space to be used by passengers.

It really is a great car in every way. this 1936 Ford V-8—the finest, safest, most dependable Ford car ever built. Get complete details at your nearest Ford dealer.

LOW FORD V-8 PRICES

TEN BODY TYPES—Coupe (5 windows), \$665. Tudor Sedan, \$675. Fordor Sedan, \$755. DELUXE—Roadster (with rumble seat), \$725. Coupe (3 windows), \$725. Coupe (5 windows), \$710. Phaeton, \$735. WORLD HAPPENINGS BRIEFLY TOLD

Convicted from fingerprints on a mirror they had stolen, three middle-aged men were sentenced at Bombay to imprisonment of from one to three years.

Ontario department of education has ordered compulsory teaching of civics in all public and high schools in the province, starting in October. A new text book will be ready soon.

Business is better all over Canada and the morale of the west is improved, Robert O. McCulloch of Galt, Ont., president of the Mutual Life Assurance Company of Canada, said in an interview in Victoria.

A pearl the size of a pigeon's egg and said to be capable of protecting its wearer from all danger was part of the loot recently taken from the tomb of a Manchu prince near Peiping by grave robbers.

Lady Byng of Vimy, widow of the former commander of the Canadian Corps, Lord Byng, who died last June, has informed Dominion headquarters of the Canadian Legion she will take part in the Vimy pilgrimage in July next year.

Successful use of an instrument which bores through the brain to the skull pan and burns away tissues producing a fluid that causes hydrocephalus, a condition causing infants to become idiots, is announced by Dr. Tracy J. Putnam, of Boston Children's hospital.

Nearly \$27,000,000 of new ordinary life insurance, a slight increase as compared with the same month last year, was sold in Canada and Newfoundland in August according to returns of the Life Insurance Sales Research Bureau, Toronto. Of the total, sales in Saskatchewan were \$996,000.

England To Receive Relic

Armada Jewel Has Been Given To Art Collection Fund

The Armada jewel, one of the most beautiful relics of Queen Elizabeth's time, is to return to Britain. It was bought at a saleroom in London for 2,700 guineas, and it was announced that it had been given by Lord Wakefield to the National Art Collection Fund. The jewel formed part of the Pierpont Morgan collection of miniatures. It will go to the Victoria and Albert Museum, Kensington, London.

D. E. Warford, of Sawtelle, Calif., lays claim to being the most tattooed man in America.

IN UP-TO-DATE STABLES

—Old Reliable Minard's

When horses come in to stable with wire-cuts or saddle boils, or cows have caked udder, the thing to do is get the Minard's bottle at once, as Mr. Dowd of Glenboro, Manitoba, knows. He writes:

"I like your Minard's Liniment. Like to have it in the house. I have found your Minard's Liniment especially good for barbed wire cuts on horses."

A family doctor prepared Minard's Liniment over 50 years ago. Still invaluable in every stable and every house.

Grows Huge Grape Vine

German Boy Planted Riding Switch Left By Customer

Thirty-five years ago a Dr. Dick of Diamond Creek, Victoria, was out riding near Heidelberg, Germany. He left his riding switch behind at a smithy's where he was having his pony shod. The smithy's lad recognized the switch as a grape vine cutting. He planted it in his cottage. Now it has grown to a full vine 35 yards long extending over the fence across a line and along the eastern wall of a hotel.

Liner Gangway Blocked

Passengers At Southampton Held Up By Thousands Of Bees

Thousands of bees held up passengers about to embark on the liner Moldavia at Southampton, England. The bees settled down comfortably at the foot of the passenger gangway and defied attempts to move them. A hose was tried, but this merely incited the bees, and caused them to buzz in clouds, scattering onlookers. Eventually order was restored, and embarkation proceeded.

HARVESTING IN SASKATCHEWAN AT 20 BELOW!

Just about the middle of December, one of the most unique and interesting annual harvests to be garnered on the North American Continent will be in full swing. Not wheat—but Mineral Salts. The scene will be Little Manitou Lake, Watrous, Saskatchewan. The harvesters will be the employees of the Department of Natural Resources of Saskatchewan; and the harvest itself will consist of the tiny crystals of mineral salt which form in Little Manitou Lake each year at "freeze-up." It is one of the essential conditions that the harvest be completed within a period of ten days. When the Prairie

winter comes in real earnest, and the thermometer shivers down to 20 below zero, the Departmental men, warmly attired, and wearing waist-high rubber boots, gather up these crystals with specially constructed shovels, and store them in the Government warehouse at Watrous, from where they are later distributed. The medicinal qualities of this saline lake, known for many years, are becoming more and more widely recognized, and as a consequence these harvesting operations are assuming ever-increasing proportions, and the Lake is proving to be one of the Province's most important natural resources.

To Shorten Ocean Trip

Irish Free State Plans Ship-to-Shore 'Planes

London will be brought within three days of New York when civil aviation plans which are being devised by the government of the Irish Free State come into operation—possibly next year.

The scheme aims at a service of high-speed aircraft of the Douglas type, to intercept the big Atlantic liners off the west coast of Ireland and to speed the passengers to London, with the saving of a full day of travel time.

With ships of the type of the Queen Mary and Normandie the Anglo-Irish air ferry will make London and New York a matter of a mere week-end trip.

From Galway on the west coast of Ireland to Southampton by liner is at present a full day's journey, with an additional two hours to London. The new air link would bring Galway within three hours of London.

It is proposed to use amphibian machines.

From Dublin the idea is to form a new air link not only with London but also with Paris, Brussels, and Berlin.

Alberta's Coal Reserves

Alberta's coal reserves total 40,200,000,000 tons and lie buried in 1,717 square miles of provincial soil. Sir Montague Barlow, one-man commission investigating collieries, was told. Dr. J. A. Allan, head of the geology department, University of Alberta, explained Alberta's topography and geological formation.

A recent check showed that only 25 of the 1,100 Gideon Bibles placed in one Detroit hotel in 1928 remain in their rooms.

Disturbing Noises

Drive Is On In Europe For More Peace And Quietness

Not long ago Paris was perhaps the noisiest capital in Europe. It is now determined to be the quietest. It is proceeding punitively against all who by their noise disturb the "tranquillity" of Parisians or upset "internal serenity" by "offensive uproar."

Thus the prefect of police, in his exhortation to police officers to do their duty. As in London, motor-horns are prohibited in the night hours. With this single exception our own laws against offensive noises are vague, and seldom enforced. Those in Paris are particular, and are to be supported by the utmost vigilance on the part of the police. A rackety vehicle is forbidden. So is a raucous motorhorn, a siren, a carpet-beater, a street-crier, or a disturbing loudspeaker. When complaints are made it is the duty of the policeman to take immediate action.

In London we continue to suffer unregulated horns, pneumatic drills, gramophones, bagpipes, and even brass bands, and because we are not by nature a noisy people we suffer in silence and without redress.—London Spectator.

Wars Of Conquest

One Thing Of Which British Empire Cannot Be Accused

What war of conquest has the British Empire been engaged in for a hundred years and more, or ever will be again? The Boer War, says some one? Was it a war of conquest? The British Empire defeated the Boers in the interest of the British white people of South Africa—and then gave the Boers back their independence and their country. Was that conquest? Britain took possession of Egypt to end bloody anarchy—and has given Egypt its independence. Britain took possession of Mesopotamia from the Turks during the World War; she has given Mesopotamia its freedom. Britain took possession of Palestine in 1918—and is training the people of Palestine for independence. Britain long ago captured India; she is giving India self-government. Britain has accepted and swallowed without even a wry face every grouch and kick and squeal for autonomy and independence that any overseas British colony has ever made, including Canada most of all. What has Britain to do with "wars of conquest?" Don't let us fool ourselves by such talk.—Ottawa Journal.

Busy Year For Sun

More Eclipses In 1935 Than For Past 130 Years

The sun this year presents its greatest show of eclipses for the past 130 years. The moon will have passed between the sun and the earth no fewer than five times, and the moon will be in the earth's shadow twice. This according to Professor Alfred H. Joy, secretary of the Mount Wilson Observatory, is the greatest number of eclipses possible in one year. Not since 1805 have the sun's rays been obscured so often, states Reuter's correspondent in Pasadena. It will be only the second time since 1255 that there have been five solar eclipses in one year, and there will not be another such number until the year 2485.

Making Ten-Year Tour

Bicyclists From Sumatra Do Not Believe In Speed

Two Sumatran cyclists who do not believe in the modern craze for speed have arrived at Bombay on a ten-year tour of the world. They started from their home in Sumatra in July, 1931, and have taken over three-and-a-half years to complete 5,000 miles on their bicycles. They made fairly long stops in Indo-China, Siam and Burma and in various parts of India in order to learn the language and study the people and their religion.

By 1936, the United States public debt is expected to total \$34,258,000,000; approximately \$270 for every man, woman and child in the country.

Soviet scientists are building a telescope which will have the third largest lens in the world.

SYNOPSIS

Nancy Nelson is a sub-deb, a gay, irresponsible girl of nineteen, with no care beyond the choice of her costume for her coming-out party. Suddenly, in the market crash, her indulgent father loses all he had, and his family is faced with the necessity of a simpler method of living. At this juncture a letter is received from an eccentric relative in Colorado, who offers the girl a home on what seems to be impossible conditions.

After much consideration Cousin Columbine's offer is accepted, and Nancy and Jack arrive at Pine Ridge.

Nancy set out one afternoon to climb to the top of a hill so as to obtain a view of the surrounding landscape and misses the path Aurora Tubbs had told her to follow. A truck comes along the road, driven by Matthew Adams, and she asks him which way to go. They ascend the hill, look around, and then go on to Cousin Columbine's. There Mark Adam tells Nancy that his brother Luke has broken his leg, and that Jack Nelson has been hired to help out while Luke's leg gets better. With Jack away, Nancy finds that she is lonesome, and having no books to read, the idea of starting a public library at Pine Ridge seems a good one, and Nancy writes home to get her parents to send all the books they could spare and all they could induce others to let them have.

Nancy and Matthew Adam go Christmas shopping in a neighboring town. On their return to Pine Ridge, Nancy is amazed to see the Columbine residence all lit up, and asks Matthew if he knows why. He said: Let's go in and see. Then Nancy learns that she is having her debut, but in a different setting than had been planned for her in Boston.

Nancy's parents and friends gave their liberal support to her request for books, and a sizeable box arrived in due course. Father Adam painted a sign for the library, and the Adam boys worked on the shelves for the books and decorations to make the room look presentable.

Jack Nelson, Matthew Adam, and Nancy go to the prairie home of Matthews' uncle for the ride, and after Nancy and Jack leave for home, they are caught in a blizzard.

Now Go On With The Story

CHAPTER XVIII.—Continued

Where that empty milk can came from they never knew; but for a while it created not only diversion, but a feeble warmth that was dearly welcome. With the aid of a pocket knife Jack ripped the leather covering from the seats, and used excelsior stuffing for a fire. School books

came next, but not until darkness was descending and all hope of seeing the missing driver was given up.

"I'd go for help," Jack told his sister grimly, "but even if the road weren't drifted, I'd never make it with night coming on. We've been here about four hours, haven't we? It seems a lifetime already, and these youngsters have been here a good while longer. If things aren't better in the morning I'll have to go. Nance. Have you noticed" (he lowered his voice), "those twins are getting drowsy, both of 'em; and so's Paul Evans. I can't tell whether they're just sleepy, or— Look here, sis! It's up to us to keep them moving!"

Darkness came fast; but slowly, terribly slowly, it seemed to Nance, hour after hopeless hour dragged on. Wild wind still raged about them, and at the back of the bus a snow-drift had collected, sifting in through the broken window and making their cramped space smaller still. Though all worked desperately to keep the fire burning, a sudden, especially fierce gust had blown it out; and there were no more matches. Jack had long since relinquished his sheep-lined jacket; and Nancy's knitted skirt was pinned securely about a shivering boy.

Pretense at games—prancing up and down the aisle—anything to keep blood circulating in those small, cold kiddies, was kept up valiantly; but as night descended the children who were not crying had dropped asleep, huddled together in a corner, and tears of fright and pity dimmed Nancy's eyes as she looked down at them.

Through that interminable night a grim and silent Jack kept moving constantly, stopping at every turn to rub the legs or arms of some small sleeper. Nancy, exhausted, sat for a time, holding within her coat a boy of seven who whimpered with the cold. Later, when a semblance of warmth returned to him and he dropped asleep, she too arose to move about the crowded quarters, and like her brother, chafe numb hands and feet.

Dawn came at last, and the storm had not abated.

"But we're alive," said Nance, teeth chattering as she tried to speak. "We're all alive."

Jack faced her suddenly. Almost it seemed that he was angry.

"And how long will we last? How long, I ask you?" He raised a foot and she saw a bare leg above the shoe. "I put my socks on Joey Miller three hours ago when you were nodding. That boy's all in, Nance; and some of these little girls won't live the day through unless help reaches us. If we had food it might put new life into them; but every lunch pail's empty and—"

He stopped, silenced by a moan from some one in the huddled mass, and lifting a child, worked at her stiff legs in desperation. It was, Nance saw, the twin who wore her sweater; and suddenly the girl was pulling off her woollen stockings while Jack protested: "You keep those on, sis! Say, are you going crazy? Do you want to freeze to death? You're in your thin silk undies now. I know it. I saw you sneak out of that knitted thing a while ago. Damn you, Nance Nelson, you keep those stockings on!"

Nancy said nothing. Jack was, she understood, half crazed with anxiety for all those helpless children and herself as well. Slipping bare feet into her shoes again, she knelt to pull her warm hose over the icy legs of the small sufferer; while one of the girls, watching in silence, struggled out of her coat and buttoned it about her little sister.

Nance threw her a smile, a drawn, sad smile that Cousin Columbine wouldn't have recognized.

"Come help me, Evelyn," she said gently. "We must wake some of the little ones and keep them moving."

One after another they got them to their feet, those weary youngsters. Some, unable to understand, protested, weeping. Others did their brave best to help. It was nearly noon when, as the wind subsided, Jack said the words that struck terror to his sister's heart.

"I'm going now, Nancy." His voice trembled a little. "As I see it, there's no other way. Keep up your courage; and for God's sake, Nance, keep fighting. Unless the wind starts up again I'll reach that ranch in a few hours."

"And—if you—don't?" 2118

AIR CELL battery lives on air for 1000 hours..

Here is the "A" battery which has revolutionized the radio industry. It is making the battery set as efficient and as simple to operate as an electric receiver.

Eveready Air Cell needs no recharging. It energizes itself by "breathing" oxygen—it literally "lives on air" for 1000 playing hours.

With the Air Cell there is no gradual slackening of power which so often spoils radio reception. It maintains itself at full strength to the end.

Don't envy your city friends who have electrically operated radio sets. Now you can have the same clear reception with no trouble or bother. That is, if you buy a new Air Cell Radio.

These new sets, now made by all Canadian radio manufacturers, use the Eveready Air Cell "A" battery which does away with storage batteries and needs no recharging.

The amazingly long life of the Air Cell—with no upkeep costs—gives you true economy.

Eveready Layerbilt "B" Battery is the ideal companion.

Their eyes met, and Nance knew her brother realized how slim a chance he had. Her lips trembled; but he made a gesture toward the children.

"I know—but I can't let them die, Nancy, while there's a chance to save them. Bill," (turning to the boy who wore his jacket), "I'm going for help and it looks as if I'd have to take that coat. No, I won't need the socks" (as the little boy stooped bravely to remove them). "Tom Osgood, you keep the kiddies moving. I'm counting on you older ones to help."

"Look here," spoke up the boy suddenly, "you find a fence, Jack, and follow it if you can. Dad told me once that if ever I got caught out in a blizzard, to find a fence and just hang onto it. And if you run into a mail box you'll know a gate is somewhere near. Gosh! Jack, I—I sorter wish you wouldn't go."

Jack forced a smile.

"Now don't you worry, kid. I'll get there sure, so long as the wind stays quiet. You just help Nancy every way you can; and whatever happens, don't go to sleep. Keep thinking that by night we'll be safe home. Good—good-bye—every one."

He did not look at Nancy as he strode away. The girl knew that he did not dare to; and in another moment his tall form was blotted out. What fate would meet him, alone on those terrifying plains, she wondered, tears stinging her eyelids. And (with a clutch of fear), was the wind rising?

Time passed, interminable hours

that seemed unending. The dreaded wind died down, returned, and died again, not to return. No one could say just when the blizzard ceased, for one by one the children were succumbing to the portentous drowsiness. Once Nance succumbed herself, to be aroused by the frantic, pounding fists of Tommy Osgood.

The cold was still intense when that second dusk approached the prairies; but the whimpering voices were hushed in an ominous silence. Most of the children had given up by now, completely spent with cold, and hunger, and even fright. For there had been strange happenings since Jack's departure. Twice they rejoiced at the sound of approaching horses, only to find that their ears must have deceived them. Two of the children had "seen" the schoolhouse, and, as the mirage faded, burst into tears of disappointment.

Working courageously on icy arms and legs, Nance knew, a sense of terror creeping through her, that she was giving out. Her eyelids kept closing against her will. At times it

seemed impossible to drag them open. Her hand were numb; her bare legs curiously lifeless.

A Clever Photographer

Had Brilliant Idea When He Mistaken Customer's Address

A young man living at Weingarten, in Wurttemberg, had himself photographed, but the photographer mistook the address, to which the photograph should have been forwarded. What was the photographer to do? He stuck a proof of the photo on the outside of the envelope and added the words "To this gentleman in Weingarten." The photographs reached their correct destination safely.

"No Ransom" Here Saturday

"No Ransom," which comes to the Opera House on Saturday, features Leila Hyams, Phillips Holmes and Jack LaRue in the leading roles.

Damon Runyan, whose story "The Big Mitten" inspired "No Ransom," needs no introduction to movie patrons. "Lady For a Day" proved to exhibitors and fans alike that its author was not only the greatest sports writer in the country, but a creator of fictional masterpieces that were especially adaptable to the screen. "A clean, humorous bill of entertainment with a novel, harmless gangster twist," says Motion Picture Daily, of "No Ransom." "Its unique situations and clever dialogue sustain interest throughout," continues the same reviewer. The Hollywood Screen World applauds it with this sendoff: "The big punch is the travesty on psychology which is handled in a most adept manner. It keeps the ticket-buyers in good humor and fits in nicely with the theme of the story. It is the comedy situations that put the picture over." Variety reports: "An amazing travesty on kidnapping, developed with freshness and having an excellent story basis for its comedy. It has a kind of optimism which makes it refreshing—a diverting piece of entertainment."

Landrace Swine To Be Tested

A shipment of Landrace hogs, consisting of three aged sows, three gilts and one young boar, arrived at the Dominion Experimental Station, Lacombe, on October 17.

The Landrace is the breed used by the Danes in producing the famous Danish bacon for the British market. These pigs are somewhat similar to the Yorkshires, the most notable difference being in the large ears, which flop forward over the eyes, almost to the end of the snout. The Landrace is somewhat shorter in the leg and smoother in the shoulder than the Yorkshire, with good length and depth of side and exceptionally well-filled hams and hind-quarters. The specimens received at Lacombe also show high quality throughout. The general impression given by these pigs is that they are V-shaped. Starting in a point at the snout the two sides gradually diverge until they are widest apart at the quarters.

As the Danish government was unwilling to export Landrace breeding stock to Canada, one of her greatest competitors for the English bacon market, these pigs were purchased in Sweden. They are, however, essentially the same breed and type as the Danish Landrace.

Burnside Notes.

Mrs. Jack McDonald of Vancouver spent a few days last week at the McLean home, having come down from Innisfail where she had been visiting to attend the funeral of her cousin, Mrs. Hugh McLean.

There will be a dance in Lone Pine Hall on Wednesday, November 6th.
